

Kayak A travel search site that has taken the Internet by storm, now Kayak's mobile apps are having an even greater

effect. This do-it-all service will compare flight, hotel and car-rental deals, track flight statuses, manage your trip itinerary, look up baggage fees, airline numbers and airport information and even let you make bookings inside the app. Kayak's free app is ad-supported. A 69p premium edition removes them, but adds no additional features. Both are bargains. **Kayak Software Corp / Android and iOS / From free**

Triplt Acts like a personal travel assistant. Details of your itinerary can be entered manually or by

simply sending your confirmations to plans@tripit.com which recognises more than 3,000 booking references. This automatically creates a "smartitinerary", complete with local maps, driving directions, status alerts and helpful reminders. It even monitors flights for potential savings, tracks your air miles and can share details with family and colleagues. The Triplt app syncs with TripIt.com so this data can also be viewed on your computer. **Triplt Inc / Android and iOS / Free**

ExpenseMagic

Travelling is often chaotic, so a simple way

to capture receipts and claim expenses is a must. ExpenseMagic lets you take a photo of your receipt and send it to the app's trained book-keepers to capture all the important details for you. Even the correct VAT rate is worked out. Claims can be scheduled to be sent out automatically each month, claim status is monitored and diary integration is included. Triplt costs £2.99 per 20 expenses processed, but manual expense entry is free.

ExpenseMagic / iOS / Free

Google Translate

Doing business in a country where you don't speak the language is a nightmare

scenario, but help is at hand. This handy app will translate between more than 50 languages from Afrikaans to Yiddish. 15 languages support voice translation (using your phone's microphone) and it will speak aloud translations in 23 languages. Phonetic spelling is supported for non-latin script languages and dictionary results are provided for single words and phrases. It is a life-saver. **Google / iOS and Android / Free**

EasySign

This is a quick way around signing and filling out documents on the move that would

normally need to be done by hand. Your signature is drawn freehand and can be applied in any colour to PDF, Word, Excel, HTML and even picture files along with date stamps and any blocks of text required. EasySign saves the modified files so they can be emailed back. The first three documents are free with in-app purchasing offering five, ten, 20 or unlimited document bundles from 69p to £10.49p. **Glykka LLC / iOS and Android / Free iPhone, £3.15 Android**

CamCard Solves the problem of business card clutter.

This app takes a photo of any card and automatically fills in the relevant fields to create a new contact. What separates it from the pack (and earns a premium price tag) is its level of accuracy. Batch uploading, password protection and exporting to (Outlook compatible) VCF files are also extremely useful. For a final trick, CamCard can store your details and share them via SMS or email should you run out of paper cards. **IntSign Information Co Ltd / iOS and Android / £4.42 Android, £4.99 iPhone**
